WORK EXPERIENCE

C++ Developer

- - London - September 2013 to Present

I'm Akshay C Khanna, a Postgraduate Computer Scientist from a Redbrick University, have two university degrees, a C++ developer, former clinical medical student and all-round versatile and intellectual individual. I am seeking a junior C++ developer role.

I have top grades in my A-Levels in Chemistry, Biology & Economics. I am generally an intellectually curious person. This is proven and seen in my variegated roles in working life and student life. I have been a former medical student, postgraduate computer scientist and former corporate salesman. Objectively I am therefore generally quite a smart person and am exceptionally versatile given all my roles.

I got my Computer Science Postgraduate Diploma from University of Birmingham three years ago in 2014 (Number one in Guardian UK University Ranking for Computer Science in 2014). I did machine learning, intelligent data analysis, data structures, software engineering, and other modules to name few. I re-entered into a MBBS Medicine course following that. I dropped out and entered into corporate sales in the City selling business intelligence to biotech/pharma. I did this to try and seek financial gains in the business world. I left the corporate sales job a few months ago due to lack of intellectual stimulation from cold-calling, badgering PA's and chasing arbitrary KPI's on the sales floor.

Currently I do not have commercial programming experience however I have been writing a C++ game in Unreal Game engine applying my postgraduate compsci background. I am comfortable with C++ concepts, OPP, memory management, UML, refactoring, shell scripting, GNU/Linux, data structures, databases, subversion, software engineering, data analysis and machine learning. I use a variety of IDE's: in Windows VisualStudio, in OSX Eclipse, and in Linux Codelite.

Business Development Manager

GBI Research - London - October 2016 to November 2016

Global Biotech-Pharma Collaboration

Consultant

AMPP Group - London - August 2016 to September 2016

International B2B SaaS Corporate Sales
